KINGDOM

**THE SAFER WAY TO
STORE PERSONAL
BELONGINGS**

FEATURES

The SoftBox is a durable and resistant box made from a vinyl fabric. This product was manufactured with behavioural health facilities in mind. It can be twisted, flattened or pulled and retains its shape.

Perfectly suited to housing residents personal belongings or clothing, this fire retardant box can be printed with colours and artworks of your choosing ensuring it fits well with room schemes. A great addition to rooms within high risk facilities.

STANDARD SOFTBOX MEASUREMENTS

Height:	Width:	Depth:
30cm	30cm	30cm
Bespoke sizing is available should this be required		

BENEFITS

- A catalogue of plain colours available to choose from.
- A catalogue of images available to choose from. Bespoke options also available in any Shutterstock image. Bespoke options available on request and price on application.
- Seams are welded and stitched for additional strength and security. The welded seam protects the foam internals from absorbing water and moisture.

SOFTBOX

SPECIFICATIONS

- The SoftBox is extremely durable, has a high degree of flexibility and has great mechanical and dimensional stability over time. It can be flattened, twisted, pulled and will retain its original shape.
- The exterior vinyl is high performance dirt resistant and cleanable. The surface finish makes it easy to clean. Just wipe it with water, a dampened sponge and a neutral soap to restore it's original attractive appearance.
- The strength of the fabric will hold up to daily service user use.
- The SoftBox is Fire retardant and is tested to Crib 5 BS5852 specification. The foam characteristics release very little heat and only small quantities of smoke and toxicity during combustion.
- The vinyl exterior and the water-based printing ink have a GREENGUARD certification and is certified as a low emission product suitable for indoor use. The water-based ink has stretch and durability and is GREENGUARD Children's and Schools certified. The inks contain no HAPs (hazardous air pollutants) or sensitizers, have no VOC's (volatile organic compounds), requires no special handling, is non-toxic, non-flammable and non-combustible. The synthetic polymers used in the inks are non-allergenic.
- The properties of the standard colour range (un-printed) are water repellent, antibacterial, have maximum stability and maximum resistance, are anti UVI and easy to maintain.
- The perforated holes in the bottom of the SoftBox are there to limit risk, for example, in the case a service user fills the SoftBox with water it drains away to limit suffocation risk.
